

Assignment

Christian Neil T. Baluyut

3/6/26

CPE31

Some Agile Methods - Give the advantages and disadvantages of the following Agile Methods

▶ **Adaptive Software Development (ASD)**

Advantage – Has high transparency and learning. Fit for projects with high uncertainty and frequent changes.

Disadvantage – Can be confusing and difficult to predict costs for the long term.

▶ **Feature Driven Development (FDD)**

Advantage – Very scalable, can provide progress of the project, good for complex projects for the long term.

Disadvantage – Too much for small projects, that makes it less effective than complex ones.

▶ **Crystal Clear**

Advantage – Lightweight and flexible, encourages communication through developers.

Disadvantage – Does not fit to a large group of developers. It lacks order in communication it may confuse the developers

▶ **Dynamic Software Development Method (DSDM)**

Advantage – Focuses on business value and user involvement

Disadvantage – Very flexible method where it may cause adjustments for developers.

▶ **Rapid Application Development (RAD)**

Advantage – Very Fast Deployment, has less development time, utilizes prototyping

Disadvantage – Only High skilled developers are eligible to do this method.

► **Scrum**

Advantage – Disciplined yet flexible; developer has roles to provide accountability

Disadvantage – It has constant deadlines which can stress the developers.

► **Rational Unify Process (RUP)**

Advantage – Organized and predictable, has a clear goal for big organizations.

Disadvantage – can be difficult for the developers to handle, excessive workload.

► **Extreme Programming (XP)**

Advantage – Gives High quality code, with no error. Focuses on the system's excellence.

Disadvantage – Can be expensive due to requiring high discipline and limited to only 2 developers to work together.
